

Information ISSA

PolymerMetals®

Due to the functionality of our products on board of vessels MultiMetall has a continuous increasing strong position in the cost-conscious shipping sector. Severe damages on complex vessel parts can be repaired with our technology quickly and easily.

From Germany PolymerMetals are delivered to every port in the world within a short period of time. In addition PolymerMetals can be ordered from many worldwide operating dealers which are organised in the ISSA (= "International Ship Suppliers Association"). A listing of various MultiMetall-products can be found in the ISSA's "Ship stores catalogue".

On the next pages can be found the relevant extract of the mentioned ISSA-catalogue. Then follows an overview showing the equivalent common MultiMetall order numbers according to the ISSA-order numbers, which can be used to order all products directly at MultiMetall.

APPLICATION ON METALS AND ALLOYS**MM-metal SS-steelceramic**

MM-metal SS-steelceramic is the PolymerMetal with the widest range of application for repairs and maintenance of all metals and alloys. MM-metal SS-steelceramic offers a very high quality at mechanical repairs of damaged devices (ie. caused by crack, corrosion, abrasion, impact or chemical stress). High technical data and also the chemical resistance and bonding with the structure of metallic surfaces are remarkable features of MM-metal SS-steelceramic. The Hardener yellow offers better technical data; the Hardener red is suitable for emergency and quick repairs or at non high-stressed repairs because of the short partial and full curing time.
Machinability: with SiC-grinding plates or Diamond tools
Application consistency: pasty

ISSA CODE NO

	Product(s)	Unit
75.553.01	MM-metal SS-steelceramic Hardener yellow Hardener red	1,150 kg
	MM-metal SQ Characteristic for this PolymerMetal are the extreme short full curing time and the easy processing. The powdery metal component offers, together with the liquid hardener component, a corrosion-proof alloy material with high bonding properties. MM-metal SQ can be used for repairs of components made of any metal or alloy damaged by mechanical or chemical stress or corrosion. We recommend the use of a PolymerMetal from the MM-metal SS-"product group" instead of MM-metal SQ in cases where a construction material is required (ie. for building up rudder bearings, V-grooves/keyways or bearing seatings). MM-metal SQ is a purely repair material. Hardener SQ2 is for ambient temperatures from 5°C up to minus 30°C. The other hardeners offer following application times at 20°C: <i>Hardener Pot life/Full curing time</i> SQ8 8 min/60 min SQ35 35 min/120 min <i>Machinability:</i> with standard tools <i>Application consistency:</i> from pasty to liquid	
75.553.02	MM-metal SQ Hardener SQ2	1,220 kg
75.553.03	MM-metal SQ Hardener SQ8	1,220 kg
75.553.04	MM-metal SQ Hardener SQ35	1,220 kg
	MM-metal SS-steel 381 MM-metal SS-steel 381 is a PolymerMetal and construction material. By using this developed MM-product desired material properties can be optimised. The high performance material MM-metal SS-steel 381 delivers the best technical data in case of mechanical and physical stress. <i>Machinability:</i> with standard tools <i>Application consistency:</i> pasty	
75.553.05	MM-metal SS-steel 381 Hardener yellow	0.830 kg
	MM-metal SS-steel MM-metal SS-steel is an alloy-related PolymerMetal for the repair of steel and iron materials. The alloying material contained in the polymer possesses all quality standards for the reconstitution of the nominal state in case of metallic material loss. <i>Machinability:</i> with standard tools <i>Application consistency:</i> pasty	
75.553.06	MM-metal SS-steel Hardener yellow	1,050 kg

ISSA CODE NO	PROTECTION AGAINST EROSION/ABRASION/CAVITATION	ISSA CODE NO	the type of mechanical, chemical or physical stress is decisive whether VP 10-500 shall be used. VP 10-500 can be applied on cold or warm metal surfaces. <i>Machinability:</i> with SiC-grinding plates or Diamond tools <i>Application consistency:</i> pasty
75.553.19	Ceranium® Ceranium offers maximum wear resistance against continuing material loss on metallic surfaces. With viscos-hardening layers, Ceranium protects against erosion, abrasion, cavitation or corrosion in case of dry or wet stress. <i>Machinability:</i> with SiC-grinding plates or Diamond tools Ceranium Hardener CE 0,750 kg <i>Application consistency:</i> pasty	75.553.24	VP 10-500 1,300 kg Hardener VP 10-500
75.553.20	Ceranium Hardener CE1 0,750 kg <i>Application consistency:</i> liquid	APPLICATION BY SLIDING WEAR	Molymetall® Molymetall is a PolymerMetal with a very low coefficient of friction and self-lubricating properties. The emergency running properties against solid dry friction such as sliding wear and stick-slip are excellent. After full curing Molymetall can be processed to a finished measure up to the μ -area. Possible applications are ie. hydraulic pistons, pillar guides, slide bearings, slide ways, tappet guides. <i>Machinability:</i> with standard tools <i>Application consistency:</i> pasty
75.553.21	Ceranium® DW Ceranium DW is a high wear-resistant polymer-ceramic for the preservation of metals in the area of food and drinking water. Ceranium DW has been registered according to a recommendation of the Plastics Commission of the "Federal Board of Health" at the Hygiene Institute of Gelsenkirchen, Dir.Tgb.: C82/92/St. <i>Machinability:</i> with SiC-grinding plates or Diamond tools Ceranium DW Hardener CE3 0,740 kg <i>Application consistency:</i> pasty	75.553.25	Molymetall 0,830 kg Hardener Molymetall
75.553.22	Ceranium DW Hardener CE3 0,740 kg <i>Application consistency:</i> liquid	MAINTENANCE WITH ELASTOMER-SYSTEMS	MM-Elastomer MM-Elastomer is a material with rubber-like characteristics. These Urethane-Elastomer-systems unite very good combinations of physical and chemical properties. The range of MM-Elastomer goes from Shore A hardness 40 to 95. Using MM-Elastomer elastic connections can be created or elastomer components repaired which are ie. subject to abrasion. One great advantage of MM-Elastomer is, that neither primer nor conditioner is required. MM-Elastomer has a good temperature resistance and excellent bonding properties, in particular on metallic surfaces.
75.553.23	VP 10-017 A viscoplastic polymer-ceramic with high impact and cavitation resistance. Due to its low viscosity, VP 10-017 can be processed either with brush or roll coating. This extremely smooth surface protection provides very high resistance against chemicals and has a high mechanical-physical load capacity. <i>Application consistency:</i> liquid VP 10-017 Hardener VP 10-017 red 1,200 kg	75.553.26	MM-Elastomer 95 0,480 kg Hardener EL1 <i>Application consistency:</i> pasty
75.553.28	APPLICATION IN HIGH TEMPERATURE RANGE	75.553.27	MM-Elastomer 95 0,480 kg Hardener EL1 <i>Application consistency:</i> liquid
75.553.29	VP 10-500 A PolymerMetal for repair and maintenance of metals in the high temperature range. It is a hot-hardening material which does have a clearly higher temperature resistance than cold-hardening polymer materials. A high chemical resistance especially against sulphuric acid is given. Because VP 10-500 is founded on an organic basis, durable repairs with high technical data are possible. At high temperatures	75.553.28	MM-Elastomer 95 0,480 kg Hardener EL1 <i>Application consistency:</i> brushable
75.553.30		75.553.29	MM-Elastomer 85 0,444 kg Hardener EL3 <i>Application consistency:</i> liquid
75.553.31		75.553.30	MM-Elastomer 65 0,444 kg Hardener EL4 <i>Application consistency:</i> liquid
75.553.31		75.553.31	MM-Elastomer 40 0,444 kg Hardener EL5 <i>Application consistency:</i> liquid
